

Jorge Emiliano Mora Herrera

Full Stack & AI Engineer

Salamanca, Guanajuato, MX • jorgemorah671@gmail.com

Portfolio: moraxh.vercel.app • GitHub: github.com/moraxh

SUMMARY

Full Stack Engineer with 3+ years of professional experience building production web applications, currently leading development at a SaaS startup. Strong foundation in distributed systems, RAG-based LLM integrations, and backend architecture, combined with academic research in applied AI and NLP. Final-year Data and AI Engineering student graduating May 2026.

EXPERIENCE

Software Engineer & Technical Lead | *aliA (SaaS startup)*

Sept 2025 – Present

Remote, Guadalajara-based • Team of 3 engineers • Talent management platform with integrated AI

- **Product:** Building a microservices-based SaaS for talent management - includes assessments, coaching and therapy workflows, and AI-assisted processes for HR and organizational development.
- **LLM + RAG:** Designed and implemented a Retrieval-Augmented Generation pipeline that grounds LLM responses in internal company data, enabling context-aware assistant features across the platform.
- **Architecture:** Designed the service boundaries and messaging layer using Node.js, Express, RabbitMQ for async communication between services, and Redis for caching and session state.
- **Infrastructure:** Set up Docker-based local and deployment environments, integrated Cloudflare R2 for object storage, and defined CI/CD practices for the team.
- **Frontend:** Built responsive interfaces with React and shadcn/ui, implemented JWT-based auth flows, and established component conventions used across the product.
- **Technical leadership:** Lead a team of 2 engineers - run code reviews, define technical standards, and coordinate feature delivery with product and design.

Software Developer | *El Salmantino (news/radio outlet)*

Mar 2022 – Sept 2025

Salamanca, Guanajuato • Built and maintained the internal operations platform from scratch

- **Internal CMS:** Designed and built a custom CMS used by editors to structure news scripts for live radio broadcasts, replacing a manual workflow based on shared documents.
- **News scraping:** Developed scrapers that pulled and normalized content from multiple external news sites, giving the editorial team a unified feed to work from.
- **HR and operations modules:** Built tools for staff management, vacation tracking, and payroll processing, consolidating tasks that were previously handled across spreadsheets and paper.
- **Stack:** PHP/Laravel, MySQL, jQuery, Firebase; integrations with Facebook Graph API and external news feeds.
- **Impact:** Platform became the day-to-day tool for editorial staff and administration, covering script production, scheduling, and HR in a single system.

SELECTED PROJECTS

NeuraZam - Shazam-style real-time music detection using CNNs [GitHub](#)

- Trained a convolutional neural network in PyTorch to identify songs from live microphone input.
- Stack: Python, PyTorch, TypeScript, Astro, Docker.

SignSense - Real-time American Sign Language recognition in the browser [GitHub](#)

- Web app that uses a trained ML model to detect and classify ASL alphabet letters from a live camera feed.

- Stack: Python (ML backend), TypeScript, Astro, Docker.

Aether Archive - A cleaner search experience over NASA's public image archive [Live Demo](#)

- Next.js + React + Tailwind with Motion-based transitions; consumes NASA's public API directly.
- Reworks the discovery flow that NASA's default tool handles poorly.

DICIS Tracker - Real-time classroom & professor availability for my university campus [Live Demo](#)

- Scrapes and normalizes official schedule data so students can instantly find free rooms or locate professors.
- Stack: Python (scraping + backend), Next.js, Motion.

EDUCATION

B.Eng. in Data and Artificial Intelligence Engineering | *University of Guanajuato - Campus*

Irapuato-Salamanca

Expected May 2026

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, PHP, C/C++

Backend: Node.js, Express, Laravel, RabbitMQ, Redis, REST APIs, microservices

Frontend: React, Next.js, Astro, Tailwind CSS, shadcn/ui

Databases & Storage: MySQL, PostgreSQL, MongoDB, Redis, Cloudflare R2

AI / ML: LLM integration, RAG pipelines, OpenAI API, LangChain, NLP, TensorFlow, PyTorch

DevOps: Docker, CI/CD, Git, Linux, Vercel

APIs & Tools: Facebook Graph API, Firebase, Mapbox, Open Meteo, Figma

Languages (spoken): Spanish (native), English (fluent)
